How we will achieve:

Disseminating our vision, carrying out our mission and working with our values, with all employees, partners and clients, we will strengthen our position in the market as a company of reference and quality.

Granite & Quartzite

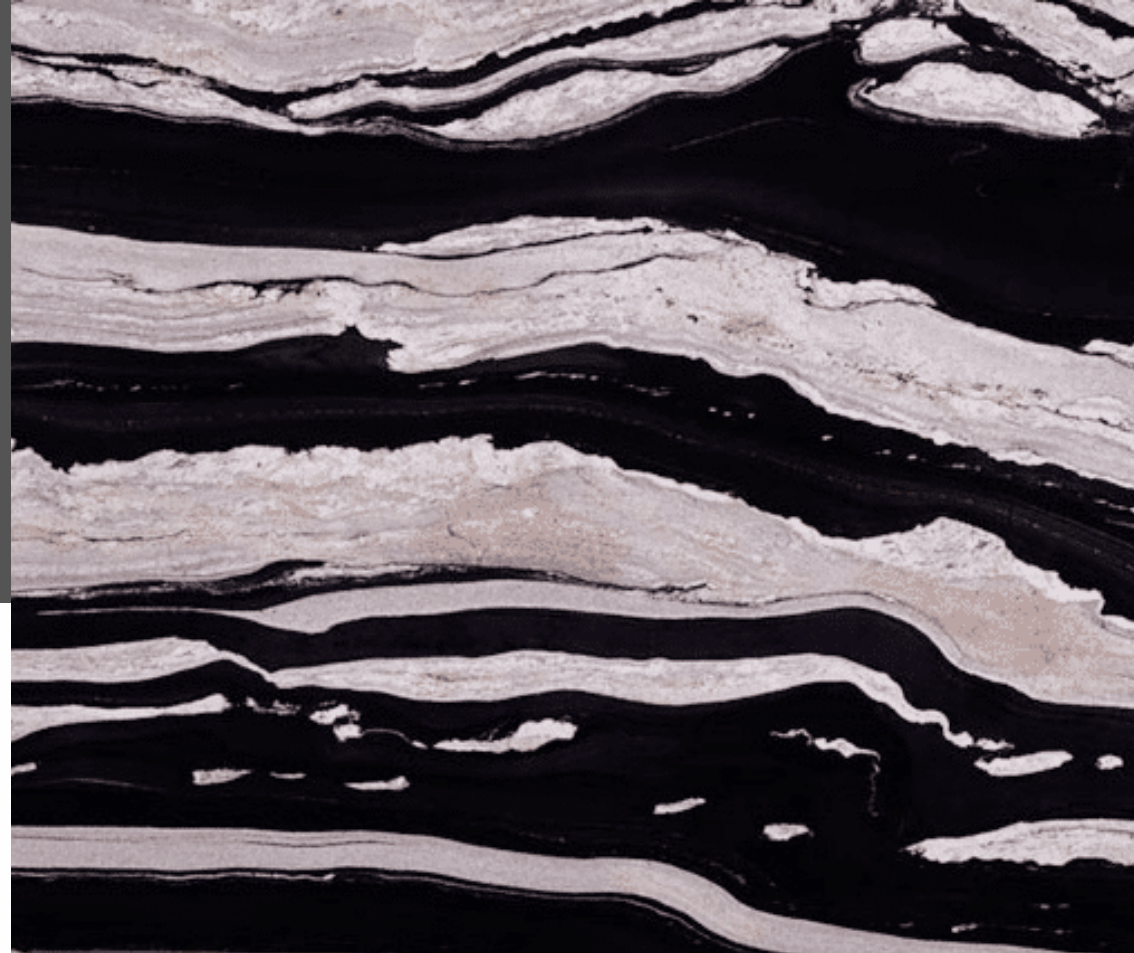

Resistance & Versatility

Granite & Quartzite

Granite & Quartzite both has a very great resistance to the different effects and actions of the time, this makes it a very requested stone and indicated to the professionals who need materials in external areas and with high traffic. Because it is a very resistant material, the granite can be used in different areas, be it external or internal, which makes it a versatile stone that can fit perfectly in different environments and projects. Another characteristic of granite is that it has a very low liquid absorption index with a high resistance to impacts and scratches. Its most common uses (by a resistance reference) are in countertops commercial and residential areas, washbasins, sills, floors and walls of areas that may or may not be in direct contact with sun and rain. Granite is a high-quality product with many color options, very suitable of different types of establishments.
